

A3324

Dust Suppressant

Description: Settling dust with water alone can be an up-hill battle because water tends to sit on top of the dust particles rather than actually wet them through. Being exposed, the water evaporates rapidly leaving dust particles dry and free to be borne into the air.

The addition of **Applied A3324** conditions the water to penetrate dust particles - fast. Dusts are wet thoroughly and stay settled as a result. The necessity for re-spraying is reduced - less trouble, less cost, better job.

Intended Use: **Applied A3324** is effective on coal, minerals and most hard to wet substrates.

Product features:

- Fast, effective wetting down of all types of dust**
- Reduces water use**
- Creates healthier, more pleasant work conditions**
- Reduces maintenance costs.**

Typical Physical Properties: *Technical data should be considered representative or typical only and should not be used for specification purposes.*

Appearance: **Amber / yellow liquid**

Directions for Use:

- For total treatment **A3324** should be sprayed at transfer or feeder points as a 100 ppm solution at the rate of 4 L per tonne of mineral.
- For stockpile spraying **A3324** should be used as a 100 ppm solution and sprayed at the rate of 2 L per m² through a cannon sprayer.
- For haul and stockyard roads **A3324** is diluted in your tanker at a concentration of 100 ppm and applied at the rate of 2 L per m².

Storage: Store at 1°C - 59°C.

Precautions: Please refer to appropriate safety data sheet (SDS) prior to using this product.
